Education

University of Ottawa

Expected May 2028

Bachelor of Software Engineering

Ottawa, ON

Relevant Coursework

- Data Structures
- Calculus
- Web Development
- Computer Architecture

Technical Skills

Languages: Python, Java, JavaScript, C#, HTML/CSS, SQL, XML

Frameworks & Tools: Django, FastAPI, Android Studio, Tailwind CSS, Cypress, Gherkin (BDD), Git, GitHub, Jira, Bitbucket, VSCode

Databases & Cloud: SQLite, Supabase, PostgreSQL, PythonAnywhere, Railway, REST APIs, Cloud Deployment

Testing & DevOps: Test Automation, End-to-End Testing, CI/CD Pipelines, Agile/Scrum, Docker (in progress)

AI & Emerging Tech: Gemini AI, Whisper AI, Claude AI, LLM API Integration, AI-assisted development workflows, Redis, Event-Driven Architecture (Solace PubSub+)

Co-op Experience

QC Engineer — Co-op

January 2026 – April 2026

DistillerSR Inc.

Ottawa, ON (Hybrid)

- Developed and maintained automated end-to-end test scripts using **Cypress** and **Gherkin (BDD)** in JavaScript, adapting existing test suites and writing new scripts from scratch based on Jira ticket requirements.
- Investigated test failures by debugging scripts and reproducing defects, then reported detailed findings to the development team, improving **bug resolution turnaround**.
- Leveraged **AI-assisted workflows** (Claude AI) to accelerate test documentation, debug complex scripts, and improve overall development efficiency.
- Participated in sprint planning, reviews, and retrospectives within an **Agile Scrum** workflow, contributing to QA coverage across multiple sprint cycles.

Projects

UoBuddy: AI-Powered Student Opportunity Platform | *Supabase, Gemini AI, Solace PubSub+* **Demo** | **uOttHack 8**

- Built the backend infrastructure for an AI-powered platform matching students with personalized opportunities (scholarships, events, internships) using **Google Gemini AI** and **REST API** integrations.
- Designed **Supabase (PostgreSQL)** database integration with complex relational **SQL** queries to store and retrieve student profiles and opportunity data reliably.
- Contributed to an **event-driven architecture** using Solace PubSub+ enabling real-time opportunity matching across student profiles upon new data ingestion.
- Delivered a working demo at **uOttHack 8** generating 15+ AI-personalized opportunity matches per student in real time.

uTaste: Android Restaurant Management App | *Java, Android Studio, SQLite, REST APIs*

GitHub | **Team of 4**

- Developed a multi-user Android app in **Java** with role-based access (Admin, Chef, Waiter) managing 100+ recipe entries and customer feedback, improving restaurant workflow efficiency by **40%**.
- Integrated **OpenFoodFacts REST API** with **JSON** parsing and error handling to auto-calculate nutritional data, reducing manual lookup time by **90%**.
- Implemented QR code ingredient scanning, full **CRUD operations**, and a local **SQLite** database ensuring 100% offline functionality across devices.
